

Add Responsive PDF Viewing in a Snap

Easily enable PDF viewing in your web application with no servers or plugins.

The Challenge

Organizations need PDF viewing capabilities that allow them to view and share documents without sacrificing control over their files. Without an ideal in-application solution, they may turn to external programs or browser plugins for their viewing needs, which exposes PDF files to security risks and version confusion. Additionally, existing PDF solutions are often unwieldy and difficult to deploy or come with resource-intensive server dependencies. They also may not be designed to provide a good viewing experience on all screen sizes.

The Solution

Accusoft PDF Viewer is a free JavaScript library that easily integrates into your web application with just a few lines of code. With a responsive UI that performs equally well on desktop and mobile, this PDF solution brings optimized document viewing experience to your users, regardless of device. As an entirely client-side integration, you can get up and running quickly without configuring any server components or installing any plug-ins. Accusoft PDF Viewer's lightning fast search capabilities and high quality rendering make it easier than ever for developers to provide dynamic PDF viewing capabilities.

A Better Viewing Experience

From its mobile-friendly UI to its powerful search capabilities, Accusoft PDF Viewer has the features you need to provide optimal viewing experiences to your users.

Features

Responsive UI

Easily view PDFs on any device, regardless of screen size. Simplified controls for touch screens delivers an out-of-the-box mobile experience.

High-Quality Rendering

Smart rendering maintains crisp image quality regardless of zoom level, including sharp text on high DPI screen displays.

Fast Content Search

Full-text search functionality delivers near-instant results, regardless of file size. Find the information you need quickly and easily.

Easy-to-Use Controls

Intuitive UI controls make it easy to zoom, pan, jump to a specific page, print pages, navigate thumbnails, or switch to full-screen view.

Benefits

Client-Side Deployment

No resource-intensive servers or plug-ins are necessary for integration. The JavaScript viewer runs entirely within the browser to keep web applications running fast.

Zero Dependencies

Users never need to leave the web application or load browser plug-ins to view PDFs, eliminating potential security vulnerabilities.

Easy Integration

Accusoft PDF Viewer integrates quickly and easily into any web application with just a few lines of code. No need to waste valuable development time configuring servers or browser plug-ins.

Desktop and Mobile Ready

With a responsive UI designed to work equally well on desktop and mobile, Accusoft PDF Viewer ensures that users will be able to view documents quickly and easily no matter what kind of device they're using.

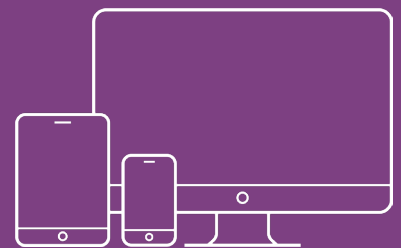

Active Support

Accusoft PDF Viewer is constantly being updated based on feedback from the developer community. Start viewing for no cost today. Need more peace of mind? Paid support services are available.

Start Viewing Right Now!

Download Accusoft PDF Viewer today at no cost to quickly integrate optimized PDF viewing within your web application across desktop, tablet, and mobile devices.
